DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4, and 6 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-4, the allowability in combination with the other claimed feature does not teach in the prior art alone or in combination the limitations of a solid electrolytic capacitor comprising a conductive metal substrate whose one end portion region is bonded to the other end portion region of the foil-like valve metal substrate, and a cathode electrode formed by sequentially laminating at least a solid high molecular polymer electrolyte layer and a conductive layer on the surface of the foil-like valve metal substrate, and a cathode lead electrode being drawn out from the cathode electrode in a direction perpendicular to one major surface of the foil-like valve metal substrate.

With respect to claim 6, the allowability in combination with the other claimed feature does not teach in the prior art alone or in combination the limitation of a method for manufacturing a solid electrolytic capacitor comprising the steps of: bonding one end portion region of a valve metal body to one of two opposite end portion regions of a foil-like valve metal substrate formed with an insulating oxide film on the surface thereof so that electric connection can be established between the valve metals, thereby forming an electrode body for a solid electrolytic capacitor component, and mounting the at least two solid electrolytic capacitor components on a lead frame, bonding one end portion

region of an anode lead portion formed in the lead frame in advance to the other end portion of the valve metal body.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
